

MATTHEW KOLODZIEJCZAK

Front-End Web Developer

matthew-k.github.io/portfolio

makolodzi@gmail.com

I am proficient in front-end development but also have some experience with back-end development. I'm extremely self-motivated and love the challenges present when learning new concepts and the creativity needed to overcome those challenges. I would be able to contribute immediately to a company where I can use my skills and continue challenging myself to grow as a developer.

INDUSTRY RELATED SKILLS

| | | | | | |
|-------|------------|-------------------|---------|------------|-------------|
| HTML5 | Javascript | Responsive Design | Git | Express.js | Ajax / APIs |
| CSS3 | jQuery | Bootstrap | Node.js | MongoDB | |

FEATURED PROJECTS

All projects are responsive and were created by me. To see the live versions and code, visit my portfolio at matthew-k.github.io/portfolio.

Haunted Hotspots

April 2016

-MongoDB -Express.js -Node.js -HTML5 -CSS3 -Javascript -jQuery -Bootstrap -Responsive Design

This site allows users to share and comments on one each others' favorite haunted places. Users have to be logged in to comment on or add a haunted place and they're only allowed to edit their own comments and haunted places.

Weather App

March 2016

-HTML5 -CSS3 -Javascript -jQuery -Responsive Design -Ajax/API

A user can see their current location's current weather and three day forecast by using this app. The javascript is in a model-view-controller format to make it easy to handle. I also purposely did not use Bootstrap to demonstrate my familiarity with making responsive websites.

Cat Clicker

February 2016

-HTML5 -CSS3 -Javascript -Bootstrap -Responsive Design -DOM manipulation

This app tracks the amount of time each cat is clicked. Users can manually change a cat's name, number of times he's clicked, and image by using the admin settings. I formatted the javascript in a mode-view-controller format to make this app scalable. If you want 500 cats instead of 5, they can be added easily.

EDUCATION

Here are just some of the courses I've taken to learn web develop. Currently I am using the site freecodecamp.com/map to further my front-end skills in javascript and using APIs.

The Web Developer Bootcamp | Udemy

March 2016

Javascript: Understanding the Weird Parts | Udemy

February 2016
